**PROF. SOURAV MUKHOPADHYAY**

Department of Computer Science and Engineering  
IIT Kharagpur

**INDUSTRIES APPLICABLE TO :** Stratign FZE, Dubai(UAE), SAG, DRDO, ISRO, WESEE, NTRO.

## **COURSE OUTLINE :**

The aim of this course is to introduce the student to the areas of cryptography and cryptanalysis. This course develops a basic understanding of the algorithms used to protect users online and to understand some of the design choices behind these algorithms. Our aim is to develop a workable knowledge of the mathematics used in cryptology in this course. The course emphasizes to give a basic understanding of previous attacks on cryptosystems with the aim of preventing future attacks. A wide variety of basic cryptographic primitives will be discussed along with recent developments in some advanced topics like identity-based encryption, attribute-based encryption, functional encryption, two-party/multi-party computation, bitcoin and crypto-currency and postquantum cryptography. The cryptanalysis part will help us understanding challenges for cybersecurity that includes network security, data security, mobile security, cloud security and endpoint security.
